

**For Immediate Release – Leach Field Construction**

The CSD has begun a long-planned leach field expansion project on the CSD owned property just to the East of the existing Falling Water Leach field. This project is planned to expand the processing capacity of the Falling Water leach field, essential for long term development of the community.

**IMPORTANT AND TIMELY  
INFORMATION**  
**Gold Mountain CSD Bulletin 2021-3**  
**June 1 ,2021**

The first step is the removal of trees from the interior of the property, followed by grading and site preparation leading up to the required percolation tests. Providing we pass the percolation test; we plan to install new trenches in three phases over the next 2-3 years. Current activity involves large excavators and hauling equipment and will likely last for less than 2 weeks.

Once this initial work is complete, the CSD will remediate the site and proceed to the following testing phase which is less invasive. We apologize for the noise and any inconvenience to neighboring residents during this period of constructions.

Thank you,

Rich McLaughlin
